Makalah Proyek Akhir Kelompok 4 Lobi Lobi - Pemrograman Dasar 02

Disusun Oleh:

Ahmad Fariz Khairi	(2306211370)
Aisya Rivelia Azzahra	(2306161864)
Aliya Rizqiningrum Salamun	(2306161813)
Maharaka Fadhilah	(2306225520)

Dosen Pengampu:

Dr. Prima Dewi Purnamasari, ST MSc

FAKULTAS TEKNIK
PROGRAM STUDI TEKNIK KOMPUTER
UNIVERSITAS INDONESIA
DEPOK 2023

Pembagian Tugas Anggota Kelompok

Ahmaf Fariz Khairi

- Mendiskusikan tema program.
- Membuat flowchart.
- Membuat source code program.
- Membuat source code function//fitur.
- Membuat video.

Aisya Rivelia Azzahra

- Mendiskusikan tema program.
- Mendiskusikan ide fitur dan panduan program.
- Merapikan code.
- Membuat pseudocode.
- Mengetik dan menyusun makalah.
- Membuat video.

Aliya Rizginingrum Salamun

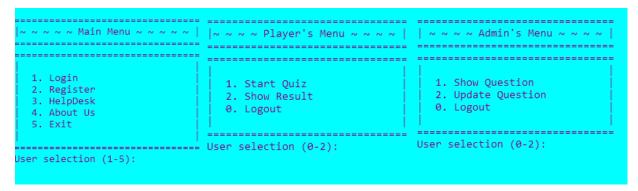

- Mendiskusikan tema program.
- Mendiskusikan ide fitur dan panduan program.
- Merapikan code.
- Membuat list variable/array/struct dll dan kegunaannya.
- Mengetik dan menyusun makalah.
- Membuat video.

Maharaka Fadhilah

- Mendiskusikan tema program.
- Membuat list fungsi dan kegunaannya.
- Membuat source code main program.
- Membuat source code function//fitur.
- Membuat video.

Penjelasan Tema Program

Kelompok kami membuat Aplikasi Mini Quiz dengan tema 7SDG: Affordable and clean energy, kami menamai aplikasi kami "Energy Smart, Energy Fun!". Game quiz ini ditujukan untuk menguji tingkat kesadaran masyarakat tentang pentingnya akses energi yang terjangkau dan bersih. Aplikasi ini diharapkan dapat membantu mengedukasi dan memahami pentingnya tujuan 7SDG, sehingga masyarakat dapat mengambil tindakan untuk menyelesaikan permasalahan 7SDG tersebut.

Program ini memungkinkan pengguna untuk mendaftar/register, masuk/login, melihat panduan program/help, dan keluar dari aplikasi/exit. Setelah mengisi data, pengguna akan dialihkan ke menu Admin atau Player sesuai peran pengguna.

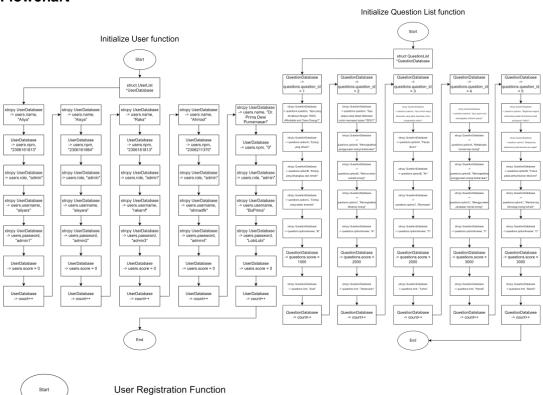

Menu Admin terdiri dari 3 pilihan:

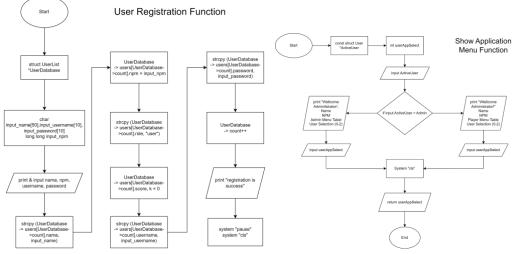

- Show Question: untuk melihat semua pertanyaan dan database kuis.
- Update Question: untuk mengedit pertanyaan, opsi jawaban, dan petunjuk. serta memperbarui skor.
- Logout: untuk kembali ke menu utama.

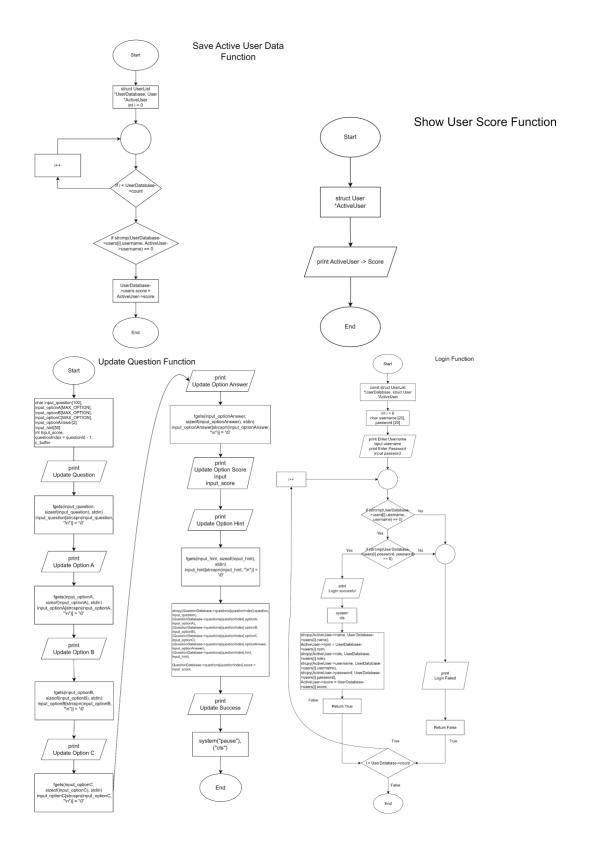

Menu Player terdiri dari 3 pilihan:

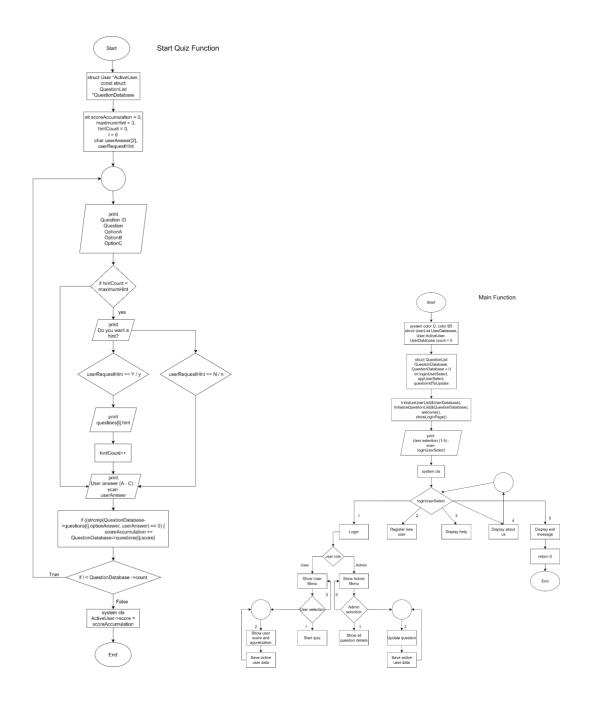

- Start Quiz: untuk memulai mini kuis tentang 7SDG.
- Show Result: untuk melihat skor kuis.
- Logout: untuk kembali ke menu utama.

List Variable/Array/Struct/Pointer dan Kegunaannya

Variable int i : digunakan dalam perulangan untuk iterasi. : array karakter untuk menyimpan dan menampilkan char a function welcome. int c_buffer : untuk deklarasi karakter dari input buffer. char input_question : untuk menyimpan input pertanyaan dari user saat memperbarui pertanyaan quiz : untuk menyimpan input opsi jawaban dari user saat char input_option memperbarui pertanyaan quiz int input_score : menyimpan skor yang diinput oleh pengguna. int userAppSelect : menyimpan pilihan menu dari pengguna. int questionIdToUpdate : menyimpan ID pertanyaan yang akan diperbarui. char userAnswer : menyimpan jawaban dari pengguna. char userRequestHint : menyimpan permintaan hint dari pengguna. int scoreAccumulation : mengakumulasikan skor pengguna. int maximumHint : maksimum hint yang diperbolehkan. : menghitung jumlah hint yang sudah diberikan. int hintCount nt loginUserSelect : menyimpan pilihan pengguna di halaman login. : digunakan untuk menyimpan NPM (nomor pokok long long input_npm mahasiswa) yang diinput oleh pengguna saat registrasi. char input_username : menyimpan username dan password yang diinput oleh pengguna.

Array

char input_password

int UserSelect

pengguna.

- char a[] : digunakan untuk menampilkan pesan selamat datang.

oleh pengguna.

: menyimpan username dan password yang diinput

: digunakan dalam fungsi help untuk menangani pilihan

char input question[100] : digunakan untuk menyimpan input pertanyaan dan pilihan.

input_optionA[MAX_OPTION]: digunakan untuk menyimpan input pertanyaan dan

pilihan.

: digunakan untuk menyimpan jawaban pengguna. char userAnswer[2]

char name[50] : menyimpan informasi pengguna yang terdapat dalam

struct User.

char role[6] : menyimpan informasi pengguna yang terdapat dalam

struct User.

char username[20] : menyimpan informasi pengguna yang terdapat dalam

struct User.

char password[20] : menyimpan informasi pengguna yang terdapat dalam

struct User.

char question[100] : menyimpan informasi tentang pertanyaan kuis yang

terdapat dalam struct Question.

char optionA[MAX OPTION]: menyimpan informasi tentang opsi jawaban A yang

terdapat dalam struct Question.

char optionB[MAX OPTION]: menyimpan informasi tentang opsi jawaban B yang

terdapat dalam struct Question.

char optionC[MAX_OPTION]: menyimpan informasi tentang opsi jawaban C yang

terdapat dalam struct Question.

: menyimpan informasi tentang opsi jawaban kuis yang char optionAnswer[2]

terdapat dalam struct Question.

char hint[50] : menyimpan informasi tentang petunjuk dari

pertanyaan kuis yang terdapat dalam struct Question.

Struct

struct User : menyimpan informasi tentang pengguna, termasuk

nama, NPM, peran, username, password, dan skor.

: menyimpan daftar pengguna dan jumlah pengguna. struct UserList struct Question : menyimpan informasi tentang pertanyaan, termasuk

ID, pertanyaan, pilihan, jawaban, skor, dan hint.

struct QuestionList : menyimpan daftar pertanyaan dan jumlah pertanyaan.

List Fungsi dan Kegunaannya

1. welcome() : menampilkan pesan selamat datang dan banner

> game ketika program pertama kali dijalankan. Menggunakan beberapa fungsi dari library `stdio.h`, `stdlib.h`, dan windows.h untuk tampilan dan

pengaturan layar.

2. initializeUserList() : menginisialisasi daftar pengguna (user list) pada awal

program. Menambahkan beberapa pengguna dengan peran admin dan mengisi data seperti nama, NPM, peran, username, password, dan skor ke dalam

struktur data `UserList`.

3. updateQuestion() : memungkinkan admin untuk memperbarui pertanyaan

kuis. Admin diminta untuk memasukkan ID pertanyaan

vang ingin diperbarui dan mengisi ulang data pertanyaan seperti teks pertanyaan, opsi jawaban,

jawaban yang benar, skor, dan petunjuk.

: menginisialisasi daftar pertanyaan pada awal 4. initializeQuestionList()

program. Menambahkan beberapa pertanyaan ke dalam struktur data QuestionList beserta dengan opsi jawaban, jawaban yang benar, skor, dan petunjuk.

5. userRegistration() : memungkinkan pengguna untuk mendaftar dengan

menginput nama, NPM, username, dan password.
Data pengguna baru akan ditambahkan ke dalam

daftar pengguna.

6. showLoginPage() : menampilkan menu utama login, meminta pengguna

untuk memilih antara login, registrasi, help desk, about

us, atau keluar dari program.

7. login() : mencocokkan input username dan password

pengguna dengan data yang ada di daftar pengguna. Jika cocok, fungsi akan mengembalikan nilai true dan

menyimpan data pengguna aktif.

8. showAllQuestionDetail() : menampilkan detail semua pertanyaan, termasuk teks

pertanyaan, opsi jawaban, jawaban yang benar, skor,

dan petunjuk.

9. showApplicationMenu() : menampilkan menu aplikasi berdasarkan peran

pengguna (admin atau user) dan meminta input

pengguna untuk memilih opsi aplikasi.

10. startQuiz() : memulai kuis untuk pengguna dengan peran "user".

Pengguna diminta untuk menjawab pertanyaan, dan skor akumulatifnya dihitung berdasarkan jawaban

yang benar.

11. showUserScore() : menampilkan skor pengguna setelah menyelesaikan

kuis.

12. showAppreciation() : menampilkan apresiasi sesuai dengan rentang skor

vang diperoleh oleh pengguna setelah menyelesaikan

kuis.

13. saveActiveUserData() : menyimpan skor terbaru pengguna aktif ke dalam

daftar pengguna.

14. keluar() : menampilkan pesan keluar dan membersihkan layar

sebelum program berakhir.

15. help() : menampilkan menu help desk yang memberikan

petunjuk singkat tentang cara menggunakan program.

16. AboutUs() : menampilkan informasi singkat tentang anggota tim

pembuat program.

17. main() : fungsi utama yang memanggil fungsi-fungsi di atas

untuk menjalankan program kuis.
